YAMJ to Mede8er Guide Windows Beta

- 1 Install Java Runtime -- jre-6u17-windows-i586-s.exe
- 2 Copy the folder YAMJ with all its contents to your C drive (you can copy this folder to any location on your PC or even to the Mede8er Hard Drive.)
- 3 Create Shortcuts to your desktop for
 - a. YAMJ GUI Config
 - b. YAMJ to Mede8er

4

Prepare your Movie Library

Pls read the YAMJ wiki <http://code.google.com/p/moviejukebox/wiki/FileNaming>

Preparing

As first step YAMJ "removes" all redundant parts from file name (file is not being renamed, YAMJ just works with name internally). The parts to be ignored are defined in the configuration file. See parameters: Skip Keywords and Version Keywords. Everything configured within these parameters is completely ignored by further processing. All "removed" keywords are counted as divider.

The "-" Character

The minus (-) character is a special character within YAMJ file names. It denotes the end of the scanable file name and the start of the file or episode title. Anything after the "-" will be ignored and used as the title

Name

Movie name must be at the first position in the file name. It can be divided by spaces, dots or underscores.

Year

Year must be in YYYY format (4 digits). Must be between 1919 - 2099. Must come right after movie name. Can be in square or round brackets.

Languages

Currently only one language supported for showing flag at the cover. However all languages from the file name are extracted and removed from possible movie name. See FilenameLanguage for more information.

Multi-Part Videos

See MultiPartVideos for information on how to name the videos with more than one part.

Episodes, Seasons

See TVSeriesNaming

Boxed Sets

See BoxedSets

Trailers and other extras

See Trailers#Trailers_Naming

Examples

File name	Movie name	Year
My Best Movie.avi	My Best Movie	-
My.Best.Movie.avi	My Best Movie	-
My_Best_Movie_2000.avi	My Best Movie	2000
1984.DivX.avi	1984	-

File name	Movie name	Year
My Best Movie.avi	My Best Movie	-
My.Best.Movie.avi	My Best Movie	-
My_Best_Movie_2000.avi	My Best Movie	2000
1984.DivX.avi	1984	-

Examples

Taxi Driver 1976.mkv
 Citizen_Kane_[1941].avi
 Gone.With.The.Wind.1939_1080p_DTS.mkv

5

Prepare your Movie Library

YAMJ does a good job of finding the correct content if you stick to the correct file naming convention. You may consider using the NFO method as it is more accurate.

- a Place each movie in its own folder
- b Create a .nfo file in each folder. To make a NFO file just save a .txt file with notepad and just rename the extension to .nfo. Use notepad to edit the nfo file.
- c Look up the movie details and address on IMDB.
<http://www.imdb.com> and copy the IMDB page address into the NFO file.
- d Save the .NFO file into the movie folder
- e Rename the .NFO file to the same name as the movie file.
- f Repeat above for each movie in your collection.

6

Open YAMJ Gui exe

a
Connect the Mede8er to your PC via USB AND select the Movie folder on the Mede8er

b
Select Jukebox only for my PC

c
Select the folder where you want the Jukebox to be stored

d
Select "add" and give the Jukebox a name.
Any name you like

e
Select "save"

f
YAMJ GUI will save two files into the main YAMJ folder on the C Drive
ie My_Library.xml and My_YAMJ.cmd

g
Create a shortcut to your desktop for My_YAMJ.cmd

7 a

Click the MY_YAMJ shortcut. A command window will open and YAMJ will start to work on your movie folder. You will see the progress as YAMJ scrapes your movie collection one by one. Do not stop this process until it is completed.

```

Initializing...
Scanning library directory My_Library.xml
Jukebox output goes to F:\MKV_1\yamj_kids _movies
Found 12 movies in your media library
Searching for movies information...
Updating data for: 1920-bolt
```

b

Once YAMJ has completed the scraping and making of the html files and folders you can check the results. Navigate to the folder you selected in point 6c and you will see a folder called Jukebox and a file called index.html. Double click the index.html file and your newly created movie database will open in your internet browser.

8

Click the YAMJ_To_Mede8er shortcut. The YJM program will open and the GUI will look like the picture below. Select the Juke box Folder and the Default Skin. You can preview the title by selecting a movie in the Title To Preview drop down list. Image quality is default to 97 and we suggest you do not change this setting if you are using Mede8er V2.0.2. The default size of 1280 x 720 should be used.

YAMJ_To...
- Shortcut

a

Select Jukebox Folder
ie as you created in 6c

b

Select "default" skins
folder
C:\YAMJ\skins\default

c

Click YAMJ to Mede8er

Click the YAMJ To Mede8er button and the cover art will be extracted from the YAMJ Jukebox folder and it will be automatically inserted into the correct folder in your main movie folder.

You can add more movie files to your movie folder at any stage. Once you have added the new movie folders just repeat the process from step 7a.
