

## USE THE EMERGENCY LOADING PROCEDURE ONLY

### Emergency Recovery Procedure

Download the latest Firmware from the Mede8er website. Unzip the file and you will find two files ie install.img and logo\_pal\_bmp. Copy both these files to the root directory of a Flash Drive. Plug the flash drive into the Mede8er. Disconnect the power jack at the rear of the Mede8er then plug it back in - Now press the on/off button and hold it pressed for 10 seconds and then release. The LED on the front fascia of the Mede8er will flash red-blue and you will get a progress bar on your TV display (some TV's will not display this) wait until the Mede8er re boots itself +- 90 sec. Your Mede8er is now being updated. Re boot once and use as normal.

**xxxx DO NOT REMOVE POWER DURING THE UPDATE PROCESS xxxxx**

**NOTE:** Once you update to V2 you cannot easily go back to older versions if you are using an internal Hard Drive that was formatted with the Mede8er. The update process will not damage your Hard Drive contents but the Hard Drive will then be shown as HDD1 instead of C. If you are not using an internal Hard Drive then you can roll back to an earlier version without any problems.

- A) Do **not** update the Mede8er from the built-in update facility on the Setup screen
- B) **After the Firmware is installed please re-boot the Mede8er – Unplug DC Jack**
- C) Do **not** do a Firmware Restore to update your Mede8er settings rather do it manually
- D) Important: Set your TV Resolution on the Main Setup Menu – Video System - for the first time after firmware update.

### Mede8er Change Log V2.01 -- 25 December 2009

128M-HMC-M03I-20091225-v7.0.7.r2892\_SANJIA\_QA20091208\_USB

\* Changed code on Mede8er security to fix "Invalid Hardware message"
